

Platinum™ Violet

**Pure Photopolymer (SBQ) Textile Emulsion;
Presensitized and Premixed for Use with Plastisol Inks;
Add Diazo for Use with Water-Based and Discharge Inks**

PRODUCT DESCRIPTION

Platinum Violet is a ready-to-use, SBQ-photopolymer direct emulsion for imprinted sportswear printing with plastisols, including aggressive post-phthalate formulations. With the addition of its optional diazo, **Platinum Violet** resists water-based and discharge inks. Its high viscosity (12,000 – 14,000 centipoise at 25° C.) provides good coating control, even on coarse mesh. Its high solids content (≈ 42 %) facilitates fast drying, good buildup of EOM (emulsion thickness over mesh) per coating stroke and, thus, good printed edge definition. **Platinum Violet** is formulated for compatibility with CTS (computer-to-screen) exposure, and automated washout and reclaiming equipment. Used with plastisols, it does not require any sensitizers or additives; it is presensitized and premixed.

Features-At-a-Glance

- ▶ Ultra-fast exposing
 - √ Suitable for CTS exposure systems
 - √ Good wet strength, exposure latitude, and durability
- ▶ High (≈ 42%) solids content
 - √ Fast drying
 - √ Better mesh bridging for good printed edge definition
- ▶ Easy wash-out
 - √ Fast stencil through-put for high volume shops
 - √ Suitable for automatic washout units
- ▶ High humidity resistance
 - √ High durability, even during the summer season
- ▶ Excellent solvent resistance
 - √ Resists aggressive post-phthalate plastisols and most wash-up solvents
- ▶ Easy reclaim
 - √ Can be used in automatic reclaiming systems
 - √ Resists water-based and discharge inks if used with optional diazo
