PRODUCT FACT SHEET

Orange™

Ultra-Fast Exposing Pure Photopolymer (SBQ) Textile Emulsion; Orange "Masking" Color Reduces Halation, Yielding Finer Resolution

PRODUCT DESCRIPTION

Orange is a ready-to-use SBQ-photopolymer direct emulsion formulated for imprinted sportswear printing. It is formulated with a "masking color" that reduces light scattering—the major cause of loss of resolution. With **Orange**, it is possible to use less costly white mesh without the closing up of fine lines and details. Despite its anti-halation color, **Orange** is ultra-fast-exposing! It is perfect for shops with high stencil making throughput, as well as shops with fluorescent tubes or other low-intensity light sources. **Orange** has high viscosity (6,000 – 8,000 centipoise) that improves control when coating screens by hand and makes it a good choice for coarse mesh. Its high solids content (44 - 46%) results in better mesh bridging and edge definition, and fast drying. **Orange** resists plastisols, most washup solvents, and some water-based textile inks, and it is easy to reclaim. **Orange** stencils are durable, will not become tacky under high humidity conditions, and have excellent wet strength and exposure latitude. **Orange** reduces stencil-making time—in coating (because of its high viscosity), drying (due to its high solids), and exposure (due to its high photo-sensitivity despite its "masking color."

Features-At-a-Glance

- Orange, high-contrast "masking" color
 - $\sqrt{1}$ Improves resolution and definition
 - $\sqrt{\text{Saves mesh costs: use white instead of more-expensive dyed mesh}}$

Ultra fast exposing

- $\sqrt{}$ Fast stencil throughput for high volume shops
- $\sqrt{\text{Assures thorough exposure, even with weak light sources}}$
- $\sqrt{}$ Dependable polymerization assures durability and ink resistance
- $\sqrt{\text{Excellent wet strength, exposure latitude, and durability}}$
- ► High (44 46%) solids content
 - √ Dries quickly
 - $\sqrt{\text{Better mesh bridging; lower Rz value yields sharper printed edges}}$
- ► High (6,000 8,000 centipoise) viscosity √ Easier to control during coating, even on coarse mesh
- Water and Solvent Resistant
 - $\sqrt{\text{Resists plastisols and many washup solvents}}$
 - $\sqrt{\text{Resists some water-based inks}}$
- ► Shelf life
 - $\sqrt{\text{unopened: 1 year at 70° F. (21° C.)}}$
